

WHAT'S YOUR A.C. TEMPERATURE AT MIDNIGHT?

- Prevents Cold Asphalt • Ends Weekend Plant Visits •
- Lowers Your Blood Pressure • New Expanded Capabilities •

INTRODUCING The NEW Niteowl® Advantage

The NiteOwl® Advantage saves plant downtime, paving crew downtime, truck downtime that could cost \$2,000 per hour or more.

The NiteOwl® Advantage is a multi-purpose **electronic watchman for asphalt plants**. The NiteOwl Advantage System is designed to automatically call up to four telephone numbers repeatedly until someone is alerted if the temperature of liquid asphalt or hot oil exceeds the pre-set high or low limits or when other plant conditions are abnormal. A prime benefit of this system: **YOU CAN CALL THE NITEOWL ADVANTAGE** which allows you to check the AC temperature or other plant conditions available 24 hours a day, 7 days a week from any location using regular telephone equipment.

“When I save as much as \$10,000 per day in downtime costs directly due to one piece of equipment, I want someone to know about it.

We have had the NiteOwl for about four years now and I wish we had made the move to them before that. They're exceptionally reliable and give us so much peace of mind that we're relieved of the constant concern of equipment failure.” **Steve Murray; Murray Group; Canada**

- “We have been so pleased with the performance of the NiteOwl that we've ordered another. **We now have a NiteOwl at each of our four plants** and we couldn't feel more comfortable if we had a live night watchman at the plants. The NiteOwl has saved us downtime over and over again. Just yesterday, the burner went down, the NiteOwl notified me and we were able to return to the plant in time to save things. It has paid for itself many times over and I give it the highest ratings possible. Absolutely nothing is better than saving a plant downtime and the NiteOwl does exactly what you said it would do.

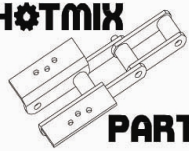

It's a great piece of equipment and I'm sold on it completely.” **Brad Youvan; Mt. Hope Rock; New York/New Jersey**

- “I know that when I call the NiteOwl, I'll get reliable, dependable information. **I know I won't come in here on Monday morning and find that everything has been off** for a day or more. I'm not driving over to the plant once or twice a day in rough weather to check on the equipment. **It monitors my heater, power supply and temperatures with greater reliability** than any other monitoring system I've ever used or had experience with.

Convenience, reliability and dependability are what make the NiteOwl valuable to me. You can't beat it.” **Joe Kroeger; Howell Asphalt; Illinois**
